**Cevolani**

Italian canmaking equipment manufacturer Cevolani will promote two new units at Metpack. The Futura S008 welder features a quality control system developed by Cevolani in collaboration with the University of Bologna's engineering department. Called the WMC573 welding monitor, it is said to be capable of analysing all weld points on cans.

Also included on the Futura S008 is a newly-developed cooling unit, which optimises the performance of cooling circuits and increases welding roller life. It operates at speeds of up to 800cpm, and features motion control on all main machine movements.

The company will also introduce its FAA575GL combination unit for general line canmaking. The machine produces cans of between 45mm and 200mm in diameter, and between 50mm and 310mm in height. It offers fast diameter and height changes, says Cevolani.
